EXPLANATION: SYSTEM DEPLOYMENT

1. User Device

- The user's **smatphone** where they acceess the banking app.
- Runs the **Mobile Banking App** and communicates with the **Wke Web Server** via the internet.
- The mobile app prepares the transaction data and starts the payment process.

2. Mobile Banking App

- The application installed on the user's smartphone.
- Facilitates user login, payment initiation, and **session management**.

3. Web Server

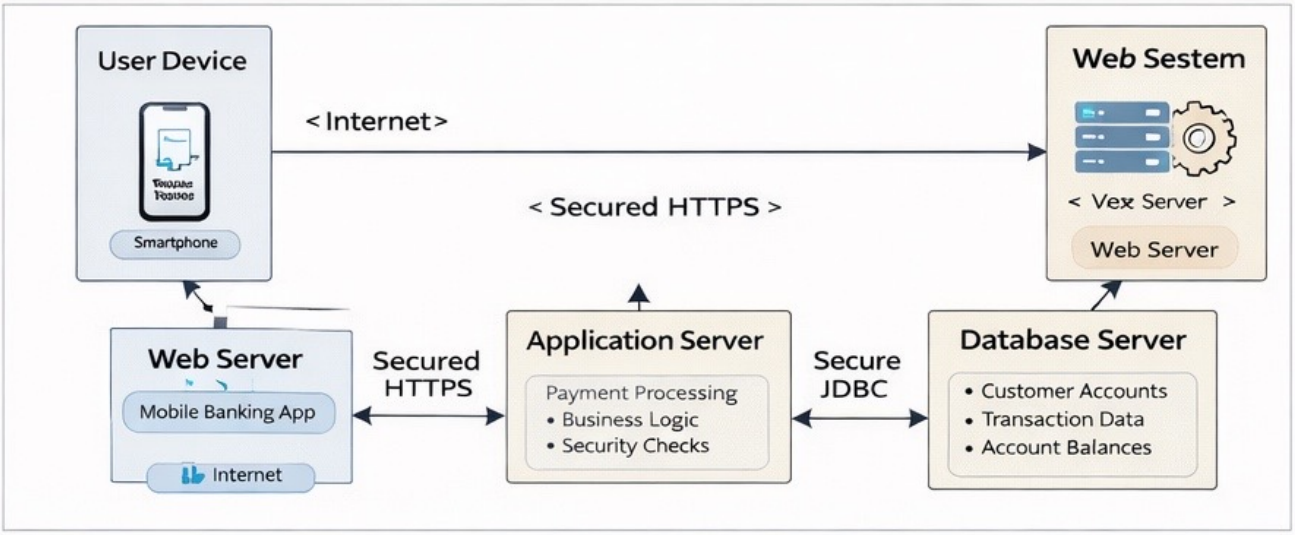
- The server that handles incoming requests from the mobile banking app.
- Hosts the banking application , which includes APIs for payment processing.
- Connects to the Application Server for further processing.

4. Application Server

- Handles business logic related to payment processing.
- Communicates with the Database Server for data retriieval and storage.
- Applies security checks and fraud detection measures.

5. Database Server

- Stores customer accunts, balance information, transaction reords, and logs.
- Uses a secure database (e.g. Oracle, MySQL) to manage and retrieve data.

6. Network


- Represents the **secure communication channel** (internet, encryption protocols).
- Ensures secure data transfer between the **User Device**, Web Server, Appi- and Database Server.
